

Frameworks Atlas - Figma Diagrams

All project frameworks exported from FigJam and inserted for print review

Source board: <https://www.figma.com/board/CmvFbnixCtXsehIEUMbEnZ>

Use with Full_Project_Report.pdf and Grid_Dynamics_Relevance_Brief.pdf

Framework source: <https://www.figma.com/board/CmvFbnixCtXsehIEUMbEnZ>

System architecture

Operators run main.py; services wrap the env and policies; artifacts and external Hub/MuJoCo platforms complete the stack.

Figure 1. Physical AI system architecture (Figma).

Grid Dynamics GAIN delivery loop

Discovery through simulation, KPI review, policy refine, packaging, and FDE hardware planning.

Figure 2. Grid Dynamics GAIN delivery loop (Figma).

Closed-loop control

Sense RGB and state, optional language, policy action, MuJoCo step, success check at reward 4.

Figure 3. Closed-loop visuomotor control framework (Figma).

Evaluation and ablation

ACT success-rate track versus SmolVLA language-sensitivity track, merged into comparative reporting.

Figure 4. Evaluation and ablation framework (Figma).

Soft sensor mapping

Maps process soft-sensing research ideas onto this robotics control stack for Grid Dynamics positioning.

Figure 5. Soft-sensor research mapped to Physical AI (Figma).

TransferCube reward states

Sparse ladder from no contact (R0) to left-arm hold success (R4).

Figure 6. TransferCube sparse-reward state machine (Figma).
